BEEKEEPING PLASTIC FRAMES

Beekeeping plastic frames are accessories used in beekeeping for a long time to increase work productivity.

Over time, these accessories have undergone the improvement process, the result being weight reduction, design finishing and especially increased mechanical strength.

The frames with cellular structure composed of two walls united by lattice, are the most widely used models in the world due to their low weight and high resistance.

THE ADVANTAGE OF USING PLASTIC FRAMES IS:

- WE ELIMINATE WORK SUCH AS ASSEMBLING, WOOD DRILLING, WIRE LAYING AND POSITIONING OF HONEYCOMBS FOUNDATIONS.
- FOR WAXING, WE USE OUR OWN WAX, ELIMINATING THE POSSIBILITY OF CONTAMINATION WITH VARIOUS DISEASES
- THE LOSSES CAUSED BY RODENTS OR WAX MOTHS ARE REDUCED TO ZERO
- MANIPULATION IS EASIER BECAUSE THE FRAMES ARE NOT PROPOLISHED
- THE CLEANING OF THE PLASTIC FRAMES IS SIMPLE, WITH THE POSSIBILITY OF WASHING
- THE COST OF PLASTIC FRAMES IS LOWER BECAUSE THEY ARE RE-USED, ON AVERAGE, 4 TIMES

INTERNAL SIZE
OF THE CELL

4,9mm
