Chestnut Honey;

Chestnut is one of the honey type of Fagaceae family. This honey is known with its antiseptic which has a dark colour, acrid and has a specific taste and smell of chestnut. June is the time of its flowering. Honey bee collect either pollen or nectar from chestnut. When bees are collecting nectar, they help to pollination and they contribute manufacture of chestnut.

The honey of the plant has a dark brown colour like its fruit. Its crystallisation is slow, and when it crystallize, it creates slim granules.
